DYNAMICS OF HUMAN BODY SUBJECTED TO VIBRATIONS ON A VIBRATING PLATE

Mariana ARGHIR

Abstract: The paper presents a study of dynamics of human body subjected to vibrations on a vibrating platform, which the human body is placed in the position of sitting, inclined towards the direction of drive train vibrations. Designed system is an original development of the earlier studies. Dynamics of human body system assimilated to the usual material system corresponds of the human body, located in the vibrating field. In the paper are established the scalar differential equations, that govern the human body dynamics.

Key words: dynamics of human body segments, general vibrations, system of differential equations.

1. INTRODUCTION

It is considered a human subject placed on a vibrating platform, which produces vertical vibrations. The body is placed at 45° inclined towards horizontal plate. A suggestive image can be date as in figure 1 [3].

Fig. 1. Human body posture sitting on the vibrating platform [1]

It is considered that in this position, the area most exposed to vibration is the range of the legs up to his chest. Therefore, they are not taken into account the arms, neck and head. This part of the body is divided into six segments (Fig. 2) [4].

Fig. 2. Segmented biodynamic model of the human body [4] subjected of vibrations

The segments masses are: \( m_1 \) – mass of the dorsal region leg; \( m_2 \) – mass of the crurale region of the previous leg (the calf of the leg); \( m_3 \) – mass of the femoral region leg; \( m_4 \) – mass of the leg buttocks region; \( m_5 \) – mass of the abdomen; \( m_6 \) – mass of the thorax.

2. HUMAN BODY ON THE VIBRATING PLATFORM

This initial idea about the human body under the action of vibration on the vibrating platform, was modified, and the new situation are made for the action of the active force in the body base on the \( m_4 \) mass (Fig. 3).
3. MECHANICAL SCHEMES

The start figure of this part of the paper is the Figure 3, and the segment in each figure will be presents as the original position.

3.1. Mechanical Characteristics

The segment is considered formed with: mass, spring and, damper. The notations and the values are given in the Table no.1.

3.2. Mechanical Schemes of the Segmentation

The mechanical schemes [1], [2] of the segmentation are given in the following figures.

Fig. 3. Biomechanical scheme of the human body on the vibrating platform

In the Figure 3 are presented the gravity forces for the body segments (Gₖ, i=1, 2, ..., 6), the action force (F(t)), that acts over the body situated on the vibrating platform, and the linkage forces (N₁ and N₂) the normal reactions on the segments who are posted on the platform.

An important fact is that the action force is situated at the distance “l” about the application gravity force for the “4” segment, because here there is vertical direction of the mass centre position of the mechanical system. But the action force is divided into two different components, because they are direct applied on the subjected components of the human body.

\]

Fig. 9. Mechanical scheme of the thorax
4. DIFFERENTIAL EQUATIONS

Using the mechanical schemes made in the figures between 4 and 9, they can be write the differential governing equations, for the system assimilated human body located on a vibrating platform.

4.1. Dorsal Region Leg

In the Figure 4 is the mechanical scheme of the dorsal region leg (foot), and the dynamics equilibrium is given by the central motion theorem.

\[ m_z \ddot{z}_1 = -c_{1y} \dot{z}_1 - k_{1y} z_1 + c_{2y} (\dot{z}_2 - \dot{z}_1) + k_{2y} (z_2 - z_1) + F_1(t) \] (1)

4.2. Crurale Region of the Previous Leg

The crurale region of the previous leg, named and the calf of the leg, has its mechanical scheme in the Figure 5, and the dynamics equilibrium is given by the central motion theorem, into two differential dynamics equilibrium, because the shank has two perpendicular motions.

\[ m_z \ddot{z}_2 = -c_{2y} \dot{z}_2 - k_{2y} (z_2 - z_1) + \frac{\sqrt{2}}{2} (c_{3y} + c_{3y}) \cdot (\dot{z}_3 - \dot{z}_2) + \frac{\sqrt{2}}{2} (k_{3y} + k_{3y}) \cdot (z_3 - z_2) \] (2)

\[ m_x \ddot{x}_2 = \frac{\sqrt{2}}{2} (c_{4y} - c_{3y}) \cdot (\dot{x}_4 - \dot{x}_2) + \frac{\sqrt{2}}{2} (k_{4y} - k_{3y}) \cdot (x_4 - x_2) \] (3)

4.3. Femoral Region Leg

The femoral region leg (femur) is presented in the Figure 6, and its differential equations into two perpendicular directions are given in the following system.

\[ m_z \ddot{z}_3 = -\frac{\sqrt{2}}{2} (c_{5y} + c_{3y}) \cdot (\dot{z}_5 - \dot{z}_3) - \frac{\sqrt{2}}{2} (k_{5y} + k_{3y}) \cdot (z_5 - z_3) + \frac{\sqrt{2}}{2} (c_{4y} + c_{3y}) \cdot (\dot{z}_4 - \dot{z}_3) + \frac{\sqrt{2}}{2} (k_{4y} + k_{3y}) \cdot (z_4 - z_3) \] (4)

\[ m_x \ddot{x}_3 = \frac{\sqrt{2}}{2} (c_{6y} - c_{3y}) \cdot (\dot{x}_6 - \dot{x}_3) + \frac{\sqrt{2}}{2} (k_{6y} - k_{3y}) \cdot (x_6 - x_3) + \frac{\sqrt{2}}{2} (c_{5y} - c_{3y}) \cdot (\dot{x}_5 - \dot{x}_3) - \frac{\sqrt{2}}{2} (k_{5y} - k_{3y}) \cdot (x_5 - x_3) \] (5)

4.4. Leg Buttocks Region

In the Figure 7 is given the mechanical scheme of the buttocks, and it has the motions in vertical direction for the active force excitation, but, in same time it has the motion in horizontal direction due to the linkages with the segments of the body.

The differential equations of the buttocks motions are in the next system.

\[ m_z \ddot{z}_4 = \frac{\sqrt{2}}{2} (c_{7y} + c_{3y}) \cdot (\dot{z}_7 - \dot{z}_4) + \frac{\sqrt{2}}{2} (k_{7y} + k_{3y}) \cdot (z_7 - z_4) + \frac{\sqrt{2}}{2} (c_{6y} + c_{3y}) \cdot (\dot{z}_6 - \dot{z}_4) + \frac{\sqrt{2}}{2} (k_{6y} + k_{3y}) \cdot (z_6 - z_4) - c_{3y} \dot{z}_3 - k_{3y} z_3 + F_2(t) \] (6)

\[ m_x \ddot{x}_4 = \frac{\sqrt{2}}{2} (c_{8y} - c_{3y}) \cdot (\dot{x}_8 - \dot{x}_4) + \frac{\sqrt{2}}{2} (k_{8y} - k_{3y}) \cdot (x_8 - x_4) - \frac{\sqrt{2}}{2} (c_{7y} - c_{3y}) \cdot (\dot{x}_7 - \dot{x}_4) - \frac{\sqrt{2}}{2} (k_{7y} - k_{3y}) \cdot (x_7 - x_4) \] (7)

4.5. Abdomen

The abdomen is considered as a segment of the body situated on the vibrating platform, and it has the two different dynamics equilibrium equations.

\[ m_z \ddot{z}_5 = \frac{\sqrt{2}}{2} (c_{9y} + c_{3y}) \cdot (\dot{z}_9 - \dot{z}_5) - \frac{\sqrt{2}}{2} (k_{9y} + k_{3y}) \cdot (z_9 - z_5) + \frac{\sqrt{2}}{2} (c_{8y} + c_{3y}) \cdot (\dot{z}_8 - \dot{z}_5) + \frac{\sqrt{2}}{2} (k_{8y} + k_{3y}) \cdot (z_8 - z_5) \] (8)

\[ m_x \ddot{x}_5 = \frac{\sqrt{2}}{2} (c_{10y} - c_{3y}) \cdot (\dot{x}_{10} - \dot{x}_5) + \frac{\sqrt{2}}{2} (k_{10y} - k_{3y}) \cdot (x_{10} - x_5) + \frac{\sqrt{2}}{2} (c_{9y} - c_{3y}) \cdot (\dot{x}_9 - \dot{x}_5) - \frac{\sqrt{2}}{2} (k_{9y} - k_{3y}) \cdot (x_9 - x_5) \] (9)

4.6. Thorax

The thorax is last segment in this study, and it has the dynamics equations, as:

\[ m_z \ddot{z}_6 = \frac{\sqrt{2}}{2} (c_{11y} + c_{3y}) \cdot (\dot{z}_{11} - \dot{z}_6) - \frac{\sqrt{2}}{2} (k_{11y} + k_{3y}) \cdot (z_{11} - z_6) \] (10)

\[ m_x \ddot{x}_6 = \frac{\sqrt{2}}{2} (c_{12y} - c_{3y}) \cdot (\dot{x}_{12} - \dot{x}_6) + \frac{\sqrt{2}}{2} (k_{12y} - k_{3y}) \cdot (x_{12} - x_6) \] (11)

The system of differential equations has eleven unknown quantities, and can be write in an orderly form after the unknown.
4.7. Differential Equations System

The assembly of scalar differential equations is a second-order differential system, scratchy (not homogeneous), with constant coefficients which can be written in the form of orderly after the unknown, for integration in relation to the independent variable - the time.

\[
m_1 \ddot{z}_1 + (c_{1V} + c_{2V}) \dot{z}_1 - c_{2V} \dot{z}_2 + (k_{1V} + k_{2V}) z_1 - k_{2V} z_2 = F_1(t)
\]

\[
m_2 \ddot{z}_2 - c_{2V} \dot{z}_1 - k_{2V} z_1 + \left[ c_{2V} + \frac{\sqrt{2}}{2} (c_{3V} + c_{3H}) \right] \dot{z}_2 + \left[ k_{2V} + \frac{\sqrt{2}}{2} (k_{3V} + k_{3H}) \right] z_2 - \frac{\sqrt{2}}{2} (c_{3V} + c_{3H}) \dot{z}_3 - \frac{\sqrt{2}}{2} (k_{3V} + k_{3H}) z_3 = 0
\]

\[
m_2 \dot{x}_2 + \frac{\sqrt{2}}{2} (c_{3V} - c_{3H}) \dot{x}_2 + \frac{\sqrt{2}}{2} (k_{3V} - k_{3H}) x_2 - \frac{\sqrt{2}}{2} (c_{3V} - c_{3H}) \dot{x}_3 - \frac{\sqrt{2}}{2} (k_{3V} - k_{3H}) x_3 = 0
\]

\[
m_3 \ddot{z}_3 - \frac{\sqrt{2}}{2} (c_{3V} + c_{3H}) \dot{z}_2 - \frac{\sqrt{2}}{2} (k_{3V} + k_{3H}) z_2 + \frac{\sqrt{2}}{2} (c_{3V} + c_{3H} + c_{4V} + c_{4H}) \dot{z}_3 + \frac{\sqrt{2}}{2} (k_{3V} + k_{3H} + k_{4V} + k_{4H}) z_3 - \frac{\sqrt{2}}{2} (c_{4V} + c_{4H}) \dot{z}_4 - \frac{\sqrt{2}}{2} (k_{4V} + k_{4H}) z_4 = 0
\]

\[
m_3 \dot{x}_3 - \frac{\sqrt{2}}{2} (c_{3V} - c_{3H}) \dot{x}_2 - \frac{\sqrt{2}}{2} (k_{3V} - k_{3H}) x_2 + \frac{\sqrt{2}}{2} (c_{3V} - c_{3H} + c_{4V} - c_{4H}) \dot{z}_3 + \frac{\sqrt{2}}{2} (k_{3V} - k_{3H} + k_{4V} - k_{4H}) z_3 - \frac{\sqrt{2}}{2} (c_{4V} - c_{4H}) \dot{z}_4 - \frac{\sqrt{2}}{2} (k_{4V} - k_{4H}) x_4 = 0
\]

\[
m_4 \ddot{z}_4 - \frac{\sqrt{2}}{2} (c_{4V} + c_{4H}) \dot{z}_3 - \frac{\sqrt{2}}{2} (k_{4V} + k_{4H}) z_3 + \left[ \frac{\sqrt{2}}{2} (c_{4V} + c_{4H} + c_{6V} + c_{6H} + c_{5V}) \right] \dot{z}_4 + \left[ \frac{\sqrt{2}}{2} (k_{4V} + k_{4H} + k_{6V} + k_{6H} + k_{5V}) \right] z_4 - \frac{\sqrt{2}}{2} (c_{6V} + c_{6H}) \dot{z}_5 - \frac{\sqrt{2}}{2} (k_{6V} + k_{6H}) z_5 = F_2(t)
\]

\[
m_4 \dot{x}_4 - \frac{\sqrt{2}}{2} (c_{4V} - c_{4H}) \dot{x}_3 - \frac{\sqrt{2}}{2} (k_{4V} - k_{4H}) x_3 + \left[ \frac{\sqrt{2}}{2} (c_{4V} - c_{4H} + c_{6V} - c_{6H} - c_{5V}) \right] \dot{x}_4 + \left[ \frac{\sqrt{2}}{2} (k_{4V} - k_{4H} + k_{6V} - k_{6H}) \right] x_4 - \frac{\sqrt{2}}{2} (c_{6V} - c_{6H}) \dot{x}_5 - \frac{\sqrt{2}}{2} (k_{6V} - k_{6H}) x_5 = 0
\]

\[
m_5 \ddot{z}_5 - \frac{\sqrt{2}}{2} (c_{6V} + c_{6H}) \dot{z}_4 - \frac{\sqrt{2}}{2} (k_{6V} + k_{6H}) z_4 + \frac{\sqrt{2}}{2} (c_{6V} + c_{6H} + c_{7V} + c_{7H}) \dot{z}_5 + \frac{\sqrt{2}}{2} (k_{6V} + k_{6H} + k_{7V} + k_{7H}) z_5 - \frac{\sqrt{2}}{2} (c_{7V} + c_{7H}) \dot{z}_6 - \frac{\sqrt{2}}{2} (k_{7V} + k_{7H}) z_6 = 0
\]

\[
m_5 \dot{x}_5 - \frac{\sqrt{2}}{2} (c_{6V} - c_{6H}) \dot{x}_4 - \frac{\sqrt{2}}{2} (k_{6V} - k_{6H}) x_4 + \frac{\sqrt{2}}{2} (c_{6V} - c_{6H} + c_{7V} - c_{7H}) \dot{x}_5 + \frac{\sqrt{2}}{2} (k_{6V} - k_{6H} + k_{7V} - k_{7H}) x_5 - \frac{\sqrt{2}}{2} (c_{7V} - c_{7H}) \dot{x}_6 - \frac{\sqrt{2}}{2} (k_{7V} - k_{7H}) x_6 = 0
\]

\]
5. CONCLUSIONS

In this work it is proposed a new biomechanical model of human body subjected to connections on a vibrating platform.

The human body is divided into six different segments of it, and it sat in an inclined position towards the platform with 45 degrees. Two segments are situated on the platform (foot and buttocks), and over them acts the active force having the distribution about them taking into account the masses of the segments.

The system of scalar differential equations, that governs the mechanical system motion has 11 equations with eleven unknown quantities, and it is a second-order differential system, scratchy (not homogeneous), with constant coefficients which can be written in the form of orderly after the unknown.

In this work the aim was to determine the system of differential equations that are of great complexity and required a different approach, compared to our previous studies and those that are still in the specialized literature in the field.

5. BIBLIOGRAPHY

Dinamica corpului uman supus la vibratii pe o placa vibratoare

Rezumat: Lucrarea prezinta un studiu al dinamicii corpului uman, supus la vibratii pe o platforma vibratoare, fata de care corpul uman este asezat in pozitia sezand, inclinata fata de directia de actionare a vibratiilor. Sistemul astfel conceput este o dezvoltare originala a studiilor anterioare. Dinamica sistemului material asimilat corpului uman corespunde, astfel, la solicitarile uzuale ale corpului uman, situat in camp vibrational. In lucrare sunt stabilite ecuatii diferentiale scalare, care guverneaza dinamica corpului uman
